

Claims

What is claimed is:

1. A method for dynamically creating a network based application form comprising the steps of:

receiving a request to apply for at least one of a plurality of products, the request received over the network, wherein specific information is required to be submitted to apply for each one of the plurality of products;

assembling an application page for display over the network, said page assembled from a plurality of documents, wherein each document of the plurality of documents contains at least one field corresponding to the specific information required to apply for one of the plurality of products; and

receiving information input corresponding to each field contained in the application page.

2. The method of claim 1, further including the steps of:

validating the information input by comparing the information input to validation criteria and, when the information input fails to correctly compare to the validation criteria, assembling a second application page including prompts to reenter information; and receiving corrected information input.

3. The method of claim 1, further including the step of forwarding the information input to a decision module for processing the information input.

4. The method of claim 1, further including the steps of:
- determining whether the request to apply originates from a customer that is logged in to a session manager;
- accessing stored data regarding the customer if the customer is logged in, wherein the step of assembling an application page includes inserting the stored data in the application page displayed over the network.
5. The method of claim 1 wherein the plurality of products includes banking products and the specific information required to apply for one of the plurality of products includes information regarding an amount of credit to be extended.
6. *sub 6* The method of claim 5 wherein further including the step of forwarding the information input to a decision module for processing the information input to determine if data input justifies extension of credit.
7. The method of claim 1 wherein the request is in the form of parameters received within a universal resource locator.
8. A system for obtaining application data from an applicant through a dynamically created network based application form comprising:

a decision module in communication with said dynamic application module, said decision module for receiving the data, generating a decision regarding the application, and providing the decision to said dynamic application module.

a universal session manager in communication with said dynamic application module, said universal session manager for creating a verification of an originator of the request; and

10. The system according to claim 9 further comprising a host server wherein said dynamic application module, said universal session manager and said database reside on said host server.

11. The system according to claim 10 wherein said host server is connected to a network.

12. The system according to claim 11 wherein said dynamic application module provides the application in the form of an application page over the network to the originator of the

13. The system according to claim 8 further including a processing database in communication with said dynamic application module, said processing database for receiving data regarding use of said dynamic application module.

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.
